

our top tips to save energy money and the environment...

There are many small changes which we can make to help reduce the impact of greenhouse gases and help protect the precious country we live in.

Book a boiler service

A serviced boiler runs more efficiently and uses less energy.

Don't waste water

Replacing worn washers is cheap, quick and easy and can save up to 15 litres of water a day, or 15,000 litres a year.

One degree can make a difference

By simply lowering your thermostat by just 1 degree could save you around £40 a year.

A dripping hot water tap wastes energy

In one week a dripping hot water tap wastes enough hot water to fill half a bath, so have any leaking taps fixed and make sure they're fully turned off.
